

Hello Fellow Parents!

With the summer months rapidly approaching, your student is probably itching to say goodbye to the classroom in favor of summer vacation. While the summer can be a terrific time for developing minds to relax, unwind, and refresh, it can also be a source of what some like to refer to as "Brain Drain."

What is Brain Drain?

Brain Drain occurs when the mind is not exercised. On average during the summer months children lose about about 2.6 months of math skills. The reason is simple: without practice young minds lose track of the knowledge they've accumulated during the previous year. Exercise that math muscle and your child will be prepared for a lifetime of mathematical success!

How can you prevent Brain Drain?

It's easy - just enroll your child in our summer program. We keep young minds mathematically active without putting a damper on summertime fun. We are conveniently open both morning and afternoon to accommodate busy summer schedules. And guess what.... No Homework! All work is done in center under the supervision of NJ state certified math teachers. [Check out our summer offerings, schedule and pricing information here.](#)

Why study math in the summer?

It is the one summer activity that will position your child for a lifetime of success. We review last year and preview next year grade level math skills while keeping it fun! Each school year brings new concepts and challenges that build upon expected prior math knowledge. A weak foundation will not strengthen without fortification. Imagine how empowered your child will be when they walk into math class in September mathematically prepared for the new school year!

What if I have vacation plans?

No problem! Our summer sessions can be customized to accommodate your vacation schedule. And our on-line scheduling portal makes re-scheduling easy!

Why Mathnasium?

Our method, quality of instruction and value. Independent studies prove us to be 100% effective. We use Highly Qualified NJ State Certified Instructors who provide 1-on-1 instruction, practice and real time feedback. *We teach your child* the skills they need to know (without the stress). And kids love to come; they quickly recognize that we make

their job easier. [Click here to hear \(in their own words\) what our students have to say about our program.](#)

Is Mathnasium really for everyone?

Whether your child is entering second grade or 12th, we can prepare him for the math-related challenges that lie ahead. We also specialize in preparing 8th graders for high school entrance exams and helping high schoolers prepare for the SAT/ACT.

Lower college costs and make tomorrow better?

Amazingly over 65% of all students entering college must take remedial math. That is a 3 credit class that does not count towards graduation at an average cost of \$1,000 per credit. Roll the clock back a few years and spent a portion of that expense positioning your child's future. The entire school experience will be enhanced. Math confidence is contagious across other subjects! College admission test scores are improved and you may even become eligible for scholastic scholarship.

How can I get started?

Just [email](#) or call to schedule an assessment. We will design a program that will cater to your child's needs. We know what your child *should know* this assessment will tell you what they *do know*.

Remember...

Here at Mathnasium, we believe that every child deserves to enjoy summer to the fullest. Our programs are designed to solidify your child's math skills without infringing too much on that warm weather fun. We know how to keep your child learning and having fun. We have two locations - Middletown and Ocean Township for your convenience. Please visit us at MathNJ.com or call us at 732-842-6284 to learn more about the summer sessions we offer. Together, we can stop Brain Drain from rearing its ugly head by keeping your child on the right mathematical track!
